

MERLIN

PERSONAL IMPULSE RADIATOR

THE PROBLEM:

The human body absorbs radio frequency (RF) energy, especially at higher frequencies like 2.4 GHz. Researchers found that surface area plays a big role in how much energy the body absorbs. After accounting for this, they compared the skin's absorption efficiency to various biometric factors, with subcutaneous fat thickness emerging as the critical factor.

This data was collected from 400 passengers in an airplane cabin, where human absorption was identified as the leading cause of energy loss. This emphasizes the importance of considering human absorption when studying electromagnetic signals in spaces with people.

More research is needed to explore the link between subcutaneous fat and absorption efficiency. This could lead to new tools for studying body composition and potentially benefit medical research.

OUR SOLUTION:

Merlin is a mobile device that generates low electromagnetic pulses (EMP) to reduce potentially harmful 5G emissions in your surroundings.

Its protective field covers an area of about 7 meters (29 feet) from where it's placed.

Once activated, Merlin creates a shield that protects against 4G and 5G emissions. It functions as an "attenuator," meaning it reduces signal strength without affecting the quality.

Users can take Merlin to work and use their computers or phones without interference.

Its primary purpose is to lower 5G exposure within a 7-meter radius, prioritizing safety and well-being.

The Merlin will help people who are electrically hypersensitive to ultra-high frequencies. The Merlin is made to defend against harmful 6 GHz to 100 GHz and beyond.

Specifications and Description:

Merlin is a portable device designed to protect against harmful EMF radiation. It can be powered either by a 110-volt outlet or a 9-volt battery, with a green light at the top indicating when it's active. The device emits an 8Hz frequency, which aligns with the body's natural rhythm, helping to reduce radiation from nearby Wi-Fi, 4G, and 5G towers. Weighing just one pound and measuring 6.75 inches tall by 3.5 inches in diameter, Merlin is made of durable plastic, making it both lightweight and sturdy for everyday use.

5G EMF Waves and Radiation

The wireless industry is racing to roll out 5G service. The network is supposed to be 100 times faster than current data speeds, but it requires cellphone tower equipment to be closer to users than before. Wireless companies in the U.S. say they'll have to install about 300,000 new antennas—roughly equal to the number of cell towers built over the past three decades. That's causing outrage and alarm in some neighborhoods as antennas go up around homes. This is concerning for people who are sensitive to electromagnetic signals. Merlin will reduce the 5G signal around you without interference with your current service.

Stay safe and empowered with Merlin by your side!

Features:

- Light Weight, 1.0 lbs.
- Mobile (travels with you anywhere).
- Optional 9-volt Battery Operated, (No EMF emissions).
- Covers up to 527 sq. ft of protection.
- Use at (home/bedroom, office, RV's and campers, vehicles, boats, planes, hotel rooms, vacation homes, etc.).
- Glow-ring, green light indicator (turns on or off).
- Modern Decorative Design (unbreakable).
- It has an optional 110-volt connection when needed. Cable is supplied.
- Also emits an 8Hz frequency, which aligns with the body's natural rhythm

Merlin: Your Shield Against 5G Emissions.

Merlin is a revolutionary device designed to protect you from the potentially harmful effects of 5G radiation, creating a haven within your environment. By generating low-frequency electromagnetic pulses (EMPs), Merlin actively reduces 4G and 5G emissions in a protective field that spans up to 7 meters (around 29 feet).

Using Merlin is simple: press and hold the ON button for 1.5 seconds to power it on or off. Once activated, Merlin's invisible EMP shield springs into action, reducing signal intensity without disturbing your communication system.

Think of Merlin as your signal "attenuator," quietly safeguarding your space from excess radiation while allowing signals to pass through smoothly. Whether at home, the office, or on the go, Merlin ensures you remain connected and protected effortlessly.
